Warning! This Report is the NO BULL Blueprint and Checklist for a Successful SEO Campaign!

I'll cut to the chase quickly! You're a business owner just like me! You've probably got a ton of things to do and don't have time for a lot of FLUFF.

This ebook is our company blueprint for SEO. It is our step-by-step checklist to make sure our clients' websites rank well. If you follow and do everything on this list, you will see your website, traffic, and overall business grow. **SEO is NOT rocket science!** Don't let any guru fool you. It is a measurable marketing method. There are rules to this system and when you play by the rules, you are rewarded with more and more traffic.

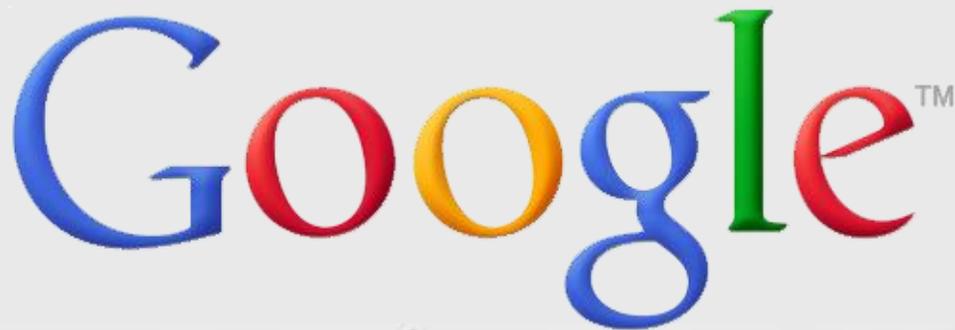

As you read through and follow the checklist, you'll see *I'm not a fan of Google*. WHY? Because Google continues to make it difficult for entrepreneurs to succeed with their online marketing. *I am a fan of entrepreneurship!* It is for this reason that I give this report FREELY, so that you can win in the game of SEO and grow your business.

Keith Morrison
President and CEO
Morrison's Marketing Solutions.

Chapter 1

Google Power

“Only when we acknowledge who controls the internet can we start making a business out of it.”

 Google™

Keith Morrison

Is Google your friend? Or are they kindred to the devil himself? I prefer to think that they are a distant second cousin to the man with horns. WHY? ***Because every time Google changes their algorithms their Advertising Revenues SKYROCKET!!!***

Panda... Penguin.... on and on it will continue. Every time Matt Cutts, the director of Google's spam team, releases a change, panic strikes, and business owners wonder if their business will win or lose in the rankings game. While I know that Google is doing what they must do to protect their Advertising revenues, they have made rankings a mystery to most businesses and webmasters.

Remember, Google isn't a friend to small business. They have made these changes to protect their "baby," Google AdWords, which accounts for 96% of Google's billions of revenues! They want the WORLD to love the search results found in Google, so that the WORLD will continue to CLICK ON ADS! This is GREAT for GOOGLE, but not so much for the small business owner who can't afford to pay £20.00 per click to gain a visitor.

FREE organic traffic isn't guaranteed anymore! It's NO LONGER the right we have as small business owners! If we will get this ORGANIC and FREE traffic we must earn it by doing what Google demands. Play by their rules and you'll be rewarded. Ignore them, and your site will be penalized. No, it isn't fair. No, I don't like it. But this Ebook is about getting Organic FREE SEO traffic. *And while there are other ways to say "SCREW YOU" to Google and get traffic from other places, there is no other website on earth that can potentially bring you thousands of dollars in sales, every single day, without spending money for each visit!*

What you might not realize is that SEO has changed dramatically over the last ten years. And NO, it surely isn't as easy as it used to be. You're going to need to change your paradigm and see that SEO is no longer about keywords and large quantities of backlinks. **IT IS ALL ABOUT WHAT GOOGLE SEES...**

The Google Chrome Browser

Since the Google Chrome browser is growing as a choice for many internet users, Google has the inside scoop to how the general public perceives websites. In a recent survey, 52% of all internet users said that they used Google Chrome for browsing. Google can now determine how many pages a person visits, what social media actions are taken, and even how long they spend on a website! Google Chrome is a game changer for SEO! Google now can determine the value of a website simply by measuring the data collected from their free internet browser.

Panda and Penguin

The Google Penalties

Google didn't stop with just their browser either! They enlisted the help of thousands of Google quality testers to see how they respond to websites. They then accumulated this data and built it in as part of their algorithms. Once Google could see what users didn't like, it was fairly easy to roll out as part of the [Panda](#) and [Penguin](#) updates.

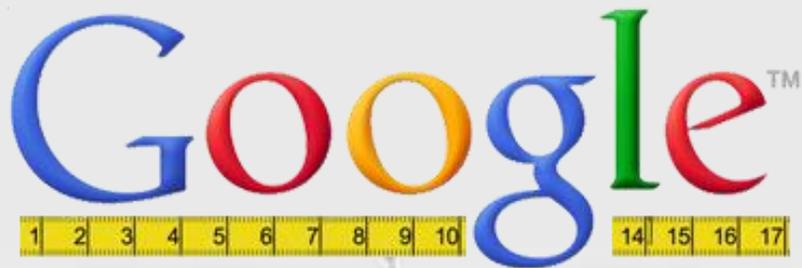

In this Blueprint, I've listed the things that Google is looking for and measuring! This is our BLUEPRINT for success for our SEO Clients. Sometimes prospects come to me looking for an easy fix! However SEO is NO LONGER EASY! Growing your traffic isn't a matter of a few small changes to your website and adding a few new links. Unfortunately, it is going to take time, money, and a major effort on your part.

Chapter 2

The Google Measuring Stick

“SEO is no longer JUST about your website, but about your website and the entire internet bubble surrounding it.”

Keith Morrison.

So what exactly is GOOGLE looking for? Here's a list of qualifiers that every website owner should remember and focus on.

1. **Time on Site** – Do people come to your site and stay? Do they read your content? Do they browse through a few pages? Do they come back? These factors are signals that your site provides value. This now means your design and content are CRITICAL to success. For some of you reading this, it means that your website's design, navigation, and entire structure may need to be changed.
2. **Traffic Sources** – Are people coming **only** from organic search traffic? If so, you're in trouble. Google gives higher ranking to sites if there are direct visitors. That means they type your domain into their browser and show up on your site. Secondly do you have referral visitors coming from social media? Google is looking for real websites and NOT content farms.
3. **Social Signals** – Do people share your content? If they don't, that could be a red flag. Google gives higher weight when a site is shared on any one of the main social websites. Many businesses have put off using social media. They can no longer afford to do so if they want organic traffic from Google.
4. **Backlinks** – Yes, linking is still important. But it has to be handled slowly, carefully, and with a wide variety of keywords. You can no longer pay guys from India \$2.50 an hour to build backlinks to your site! *It will RUIN your rankings as many found out through the Penguin updates.*

5. **New Unique Content** – If you aren't providing the Google bots with fresh unique content, watch out! There is no mistaking that Google loves blogs and fresh content. If your site is a 10-20 page site, you're already miles behind this trend. Sites with blogs that drip exciting new content slowly, most always outperform static sites with limited or duplicate content.
6. **Mobility** – Is your site mobile ready? Yes, this is something new Google's been focusing on. I'm talking about your website being friendly for the people visiting on smartphones. Responsive websites are here to stay and are a perfect way to ensure your website looks good in any browser!
7. **Over Optimization** – Did your last SEO company over optimize your website? Did they go crazy with your keyword density? Did they build 10,000 backlinks? If you've seen a big dip in rankings over the last two years, this is probably the problem. For many sites, this means removing backlinks, de-optimization, and much more.
8. **Compliance** – Google insists that quality websites will be rewarded with higher rankings and their webmaster area lists dozens of no-no's. These include things such as slow load times, video use, sitemaps, canonicalization, and site structure.

Chapter 3

The SEO Blueprint

“By taking a systematic approach to SEO, we can guarantee that nothing slips through the cracks for our clients.”

Keith Morrison.

By now you probably understand that ranking isn't as easy as it used to be, but there is still hope! On the following pages, I've listed our SEO BLUEPRINT. This is our company's internal checklist for SEO that we use here for every client that comes through the door. I'm sharing this with you so you'll have the insider's scoop on what Google is looking for and can build an SEO campaign that generates results.

You'll find that having a checklist will make the process of reviewing your website easier. On the following pages, I've included a bulleted checklist for the items we review when working on an optimization project.

Yes, it can seem overwhelming at first. But take it one step at a time and you'll get it. If you're looking for more help from me, I encourage you to follow me on Twitter and on my blog as I often post and Tweet about SEO and best practices in search marketing.

Phase 1

The Website Audit

- Review of design aesthetics, code, and site structure
- Review of page load times
- Review of mobile user experience
- Review and check for duplicate content
- Review of page naming structure
- Review of keyword use and keyword densities
- Review of keyword themes and opportunities
- Review of internal linking structure
- Review of content use
- Review of onsite SEO and meta data
- Review of robot.txt files
- Review of sitemap.xml files
- Review of browser compatibility
- Review of flash usage
- Review of blog and content marketing usage
- Review of security and monitoring of site
- Review of privacy policy and webmaster compliance
- Review of social media use and social properties
- Review of Penguin penalty and negative link building

The initial audit allows us to see if there are major changes that need to be addressed. The goal of the audit is to determine the overall health of a website. With most new clients, we find that the website will require some changes to make it more SEO friendly. While the initial phase exposes that there is a problem, it doesn't resolve the problems immediately. The audit is our initial review and allows us to begin to open up communication with our clients about the severity of the problems and the work that will be required to fix it.

Through this phase one review, we can see with the naked eye if the site needs a lot of work, or just a little. Remember, every site is different and needs to be looked at objectively. **There is no ONE SIZE FITS all SEO campaign!** That is why this is the foundation for the game plan.

Phase 2

The User Experience Audit

- Review or install Google Analytics tracking code
- Review of site and page bounce rates
- Review of pages visited and time on site
- Review of new versus returning visitors
- Review of mobile user experience and bounce rates
- Review of onsite social media conversions
- Review of social media traffic referrals
- Review of other website traffic referrals

In phase two, we dig into what the end user or visitor might be experiencing and thinking when they visit the site. This is where we really look at the raw data in Google Analytics. When going through Google Analytics, we can quickly see how people are responding to your content and what they might think about it. We can also see referral traffic, direct traffic, and current keyword trends on your website.

During this phase of review, we will be planning out a content game plan on how we can engage your visitors through the use of video, better copywriting, social media, and content marketing. The goal is to allow your website to keep your visitors engaged and spending more time on your website.

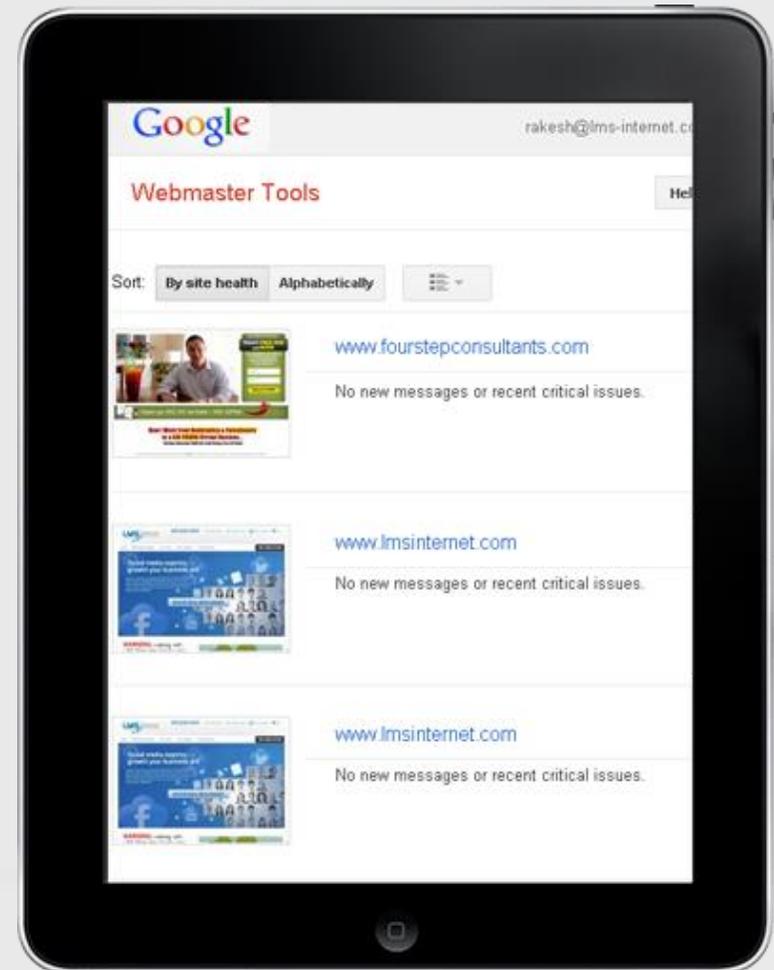

After completion of Phase Two, we can see how your traffic is responding to your website which will further solidify the changes that should be made. During this phase, our project managers compose custom reports, armed with Google Analytic data and screen shots, so that we can pursue a winning user experience game plan.

Phase 3

Webmaster Tools Audit

- Review of indexed pages versus pages in the sitemap
- Review of structure and formatting of the sitemap
- Review of crawl errors and broken html links
- Review of duplicate meta data
- Review of short meta descriptions
- Review of missing title tags
- Review of duplicate title tags
- Review of queries and overall site keyword theme
- Review of CTR trends and queries
- Review of incoming links

In phase three, we dig into how Google crawls and sees your website. By adding the site to webmaster tools, we can determine many different factors about the site and if it is in good standing with Google. Google [Webmaster tools](#) are free resources where Google reviews your site for quality and reports the findings in the webmaster tools portal. Obviously if we're trying to rank better in Google, then we need to know exactly what Google thinks about the site.

The webmaster tools audit data is also compiled into reports which will be shared with our client during our "game plan" meeting. By now, you're probably wondering when we'll start optimizing the website, but the truth is that the optimization process requires a significant amount of research before a project begins. It should be a **GIANT RED FLAG** when any SEO Agency or consultant is quick to make SEO changes without doing a thorough analysis.

For example, a few years ago I met a client who had just switched over her website to WordPress on the advice of a consultant. When they moved the site over, they didn't correctly plan out the 301 redirects, and this client lost 25,000 visitors over the course of two months, nearly crippling her business. This could have been avoided with better research and a more knowledgeable SEO team.

Phase 4

Keyword and Ranking Audit

- Review of current ranking positions
- Review of competitor ranking positions
- Review of ranking feasibility for tougher keywords (KEI Review)
- Review of long tail keyword rankings
- Review and suggestion of new content for keywords
- Review of Keyword Themes
- Review of ranking positions versus competitors

In phase four, we start reviewing the desired keywords, where they are currently ranked, and what can be done to improve the rankings. Much of this work requires an SEO tool such as WEBCEO or MajesticSEO. However, it is incredibly helpful to see where you're measuring up, especially compared to your competition.

Every good SEO campaign requires keywords. Any SEO company or consultant who ignores this point doesn't serve their clients well. Yes, some keywords are harder to rank for than others! You might be surprised, but sometimes it is better to **COMPLETELY IGNORE** extremely difficult keywords and capitalize on a larger amount of long tail keywords.

This is why a Keyword and Ranking Audit is so important to success.

A few years ago I had a prospect who wanted a guarantee that he would rank for the keyword "IPOD" because he sold IPOD accessories. My advice was to target a larger amount of keywords, where ranking was very probable. Disillusioned by another SEO company, he told me that he was going to work with someone else that would guarantee the ranking position. About a year later he emailed me asking if I could take his project on because he never saw a traffic boost and never ranked higher than position 35 in Google for the keyword "IPOD".

For most websites, there will be a considerable amount of new written content required to achieve rankings for a large amount of keywords. This is because most webpages have the ability to rank for no more than one or two main keywords. After that, a website needs more content and more pages!

I'm often amused by prospects who tell me that another SEO company is guaranteeing rankings for any 100 keywords of their choosing for some small amount of money. Yes, a few years ago that could work by simply building links. However, in today's SEO world, keyword ranking is going to take AMAZING content, links, social media, and a website that retains its visitors.

Through the FIRST FOUR PHASES, our company will more than likely have spent FORTY TO EIGHTY HOURS reviewing and compiling data for a client. The next phase is to have a game plan meeting with our client and discuss the process for growth.

Phase 5

Audit Delivery and Game Plan Meeting

- Review of all suggested website changes for SEO growth
- Review of all suggested social media practices for SEO growth
- Review of Google Analytic data and suggested changes for better user experiences
- Review of webmaster tools data and suggested changes for SEO
- Review of keyword data and opportunities
- Review of content marketing suggestions
- Review of Google penalties and suggested fixes

You might be wondering why we spend so much time researching a project before we begin to make changes on a site. Many of our newer clients are actually *VERY SURPRISED* at how much time and detail we put into this research and the reports we deliver. But remember, all SEO campaigns are unique. There is no “one size fits all” approach to SEO.

To see significant success in your SEO campaign, you can't just look at one or two areas as many companies are prone to do. You have to see the big picture and look at your website and SEO strategy objectively. When LMS delivers Phase 5 to our clients, we have given them the exact “game plan” for what is wrong with their site and how to fix it. We've also hand delivered a detailed list of keywords they should target, and a content marketing plan which will help them reach their goals.

Is that everything that we do? No! Not by a long shot. There is still much more that needs to be done to a client's website before the final project is completed, but the first five phases are all about research and planning. While it might seem like a trivial stage to those looking for a quick fix, we realize that charting a course for our clients and delivering them a clear direction for growth makes all the difference in the world to their SEO campaign.

We've had so many clients tell us how valuable this research was and that NONE of their previous SEO consultants ever mentioned the importance of the items we reviewed.

Typically phases 1-5 can take up to two months to complete depending on the size of a website and the SEO goals for a client. When working with a new client, we always start with the first five phases of research and deliver the SEO game plan. We believe so much in the research and planning, that we WILL NOT even take on a new client unless they are willing to let us complete the research first!

Once we've completed the first five phases of research and meetings, we're then able to start on the SEO work to grow. The second portion of our SEO blueprint is the steps that you'll take to actually make the SEO campaign a success. I can't say it enough, RESEARCH and REPORTING are going to be critical to your success.

Phase 6

Onsite SEO & Content

- **Commence major repairs of website to improve overall SEO**
- **Implement social media strategy and new social media designs**
- **Assignment to writers for rewriting of existing duplicate content**
- **Assignment to writers for new content for SEO keywords**
- **Building and indexing of new landing pages with new content**
- **Design and launch of WordPress blog and content scheduling for long tail keywords**
- **Implementation of social media automation for new content campaign**

Phase Six starts with a major content overhaul. Any duplicate content is removed from the website so that the website passes all checks in CopyScape. We also begin the writing process for the new content pages which will be required for better rankings for our main keywords. In most cases, these pages are added pretty quickly to the site once the content is approved from our client.

This phase also includes the major repairs needed on the website such as fixing broken links, internal linking structure, de-optimization, and updating any sitemaps and robot.txt files. Once the site is correctly optimized with the new pages added, LMS will also integrate a blogging platform which will host more content for your company, focusing on longer tail keywords. The

blog can be a separate site hosted on a subdomain or integrated as part of your main site. Our writers will then begin writing monthly content for your website so that you can take advantage of having a much larger footprint online.

Finally, we look at your offsite optimization and how people link to your website. If there are major issues with your back linking structure, then those links would be removed as well so that you are not penalized by Google for manually building links.

Phase six is a very crucial process and this phase can last for 2 – 5 months depending on the size of the project. The silver lining is that for many clients, it is the first time that they are actually making major changes to their websites which will benefit them in regards to rankings. **Within the first month of implementing these changes, our clients typically see substantial growth in regards to traffic right away.**

Phase 7

Social Media and Training

- Twitter Integration and Training
- Google+ Integration and Training
- Google Plus/Places Page Integration and Training
- Facebook Fan Page Integration and Training
- Linked In Integration and Training
- YouTube Integration and Training
- Vimeo Integration and Training

Social Media Integration

Social media? What does that have to do with SEO? Everything in today's world!!! If you remember in phase 6, we set up these platforms for our clients. This is the creation of the accounts and scheduling of content to go onto these properties. However in Phase 7, we now implement a consistent campaign to add social media posts for our clients.

All new content that we create in the content marketing campaign, will automatically be shared on most of the social media properties. We also work with our clients to come up with a winning social media marketing campaign which will increase the number of visits to the site from social media sites such as Facebook, LinkedIn, Google+, and Twitter.

This phase also fine tunes the designs for our clients' social media properties so that they are appealing. We then work with several scripts to help them gain more likes, follows, and plus ones. The goal is that our clients' social media presence will continue to grow! This is a tremendous value to the content campaign and the overall SEO campaign because Google ranks sites with social media authority higher than other websites.

In Phase 7, our clients typically continue to see growth in traffic and repeat visitors because of the implementation of social media.

"But Matt, nobody is going to click LIKE on my company page... We're in the _____ business." Yes, I hear this all the time. But Social Media is still critical. Just think of it this way, if your industry doesn't use social media very often and YOU DO, how much easier will it be for you to beat your competitors when you decide to use it?

Remember, this is a BLUEPRINT for SEO. Social media and SEO now go hand in hand. Social Media must be a part of a winning SEO campaign and for that reason, we will NOT take on any client who isn't willing to implement a social media strategy for their business. Social media is that important to SEO!

Phase 8

Mobile and Local SEO

- **Mobile Website Integration**
- **Mobile redirect Script Integration**
- **Mobile Content Testing**
- **Claim Local Directory Listings including Google Places and Google Plus**
- **Addition and Verification of Local Directory Citations**
- **Install KML File for locations**

What does mobile websites have to do with SEO? In 2013, Google announced they would soon penalize websites who aren't helpful to mobile users. Part of our SEO Blueprint is to make sure our client's websites are mobile friendly. If they aren't, there are some great ways to fix that. The options these days are endless. Many of our clients, who have websites built as part of a content management system or CMS, are able to move to a responsive theme which can be viewed perfectly on either a mobile phone or desktop PC. There are also dedicated mobile websites which are

mobile versions or condensed versions of a website.

The important thing to remember is that the WORLD IS GOING MOBILE... and your website must measure up to Google's standards if you want to capitalize on this FREE traffic. If your visitors can't use your website on a smartphone, then your rankings will soon be in trouble.

In phase 8, we also connect all the local citations from various local directories for our clients. This includes Yelp, Yellow Pages, Angie's List, Google Places, and various other directories. Google gives these directories a higher ranking value and thus it gives our clients' websites new backlinks and also better rankings in the local listings on the first page of Google.

This is an ongoing service that we do for our clients and we work very hard to keep these citations up to date with our clients' contact information. By reverifying our client data often, we receive higher rankings in the local listings categories.

Phase 9

Content, Monitoring, & Reporting

- Final review and start of social media automation
- Final review of content marketing campaign
- Final review of onsite SEO and WordPress site
- Final review of Google webmaster tools
- Review Rankings and Fine Tune Onsite SEO

By now, we may have spent as much as six months on an SEO campaign and hundreds of hours with a client. All the work has been steady and has taken our team and our clients' staff members a considerable amount of time and resources. In almost every case, our client is thrilled with the growth they have received. But the truth is, the SEO campaign isn't fully operational just yet. Rather, we've really just laid the foundation for success.

In phase nine, we do a final review to make sure that everything is in tip-top shape. The content marketing campaign is moving along nicely, the social media campaign is driving traffic, and all the metrics look clean in webmaster tools.

We now look at the rankings and traffic again and set up monthly reports so we can see the ongoing growth. If you remember correctly, we checked rankings way back in the beginning of the campaign in phase 4. By this point, we can see substantial growth in the SEO campaign and rankings. Now we're going to watch the rankings and the traffic a little closer and check them every two weeks. We'll be able to see exactly how the traffic is growing and how the content campaign is helping your sales and conversions. These are set up in reports which are delivered via email every two weeks to our clients.

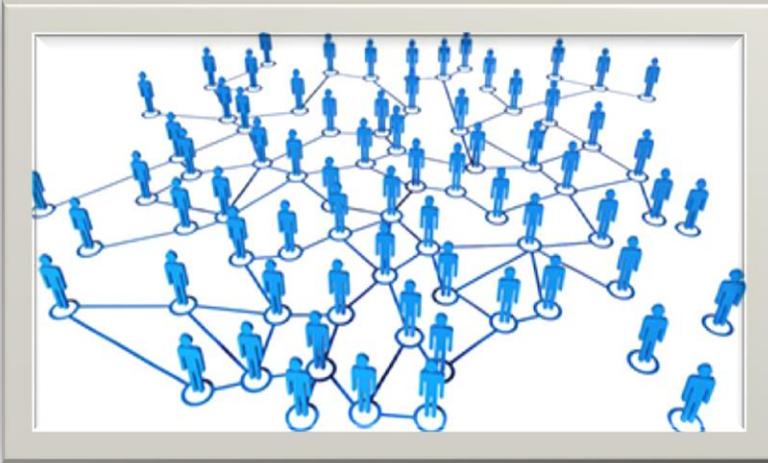

In Phase Nine, we also set up some monitoring tools to make sure your site doesn't get hacked! Hacked sites tend to not only hurt your traffic and reputation, but they can be disastrous to your traffic and rankings if not repaired quickly.

We are also steadily distributing content to both social media accounts and to your blog on a weekly basis. You now have a growing website that is consistently making changes and improving in Google's eyes.

Phase 10

Continual Content, Social Media, Links & Updates

- **Ongoing release of new content and social media**
- **Ongoing health checks, fixes, and HTML improvements**
- **Ongoing slow one way backlink building**
- **Ongoing release of link bait and Infographics**
- **Ongoing reviews of phases 1-9**

It has been a long road, but we're not done yet. We've made great strides and the website is VERY SEO friendly and nearly perfect in Google's eyes. Now it is time to ramp up the plan and continue to add new content, link bait, social media follows, and new incoming links. Even though the website may have doubled in traffic already, the key to a good SEO campaign is to continually make modifications and grow. SEO isn't a "onetime" project, but an ongoing process to keep the traffic growing.

In this last phase, the maintenance portion of our SEO Blueprint, we are continuing to add fresh new content to the website. This is critical to success. We are also reviewing all the phases frequently to be sure that the site's code is SEO Friendly. We're also creating link bait, building (very few) inbound links and working hard to keep the site as SEO friendly as possible.

Each month, our clients receive detailed reports of all new inbound links we've acquired for them. Each quarter, when we go through the full audit, our clients receive a detailed report with any changes required to their website.

SEO Blueprint Summary

As you can see, a complete SEO Program isn't nearly as easy as it used to be. We provided this ebook as our way of trying to help business owners and the general public with their search engine optimization. If you follow all of these steps, you'll see great success and you will accomplish more than 90% of most websites out there who are ignoring the best practices for SEO.

While it might not be easy, it is worth it! Good optimization takes time, but in the end it will result in significant growth for your business or organization.

You Know the Process....

And you might be wondering...

If we can help you with your SEO campaign...

Maybe... I know that sounds vague, but it really depends on you. Every day I receive phone calls from prospective clients who are looking to hire us. They go to our webinars, read my books, watch my videos, and call in requesting help, but they lack two things... A budget and a commitment to the process!

My company does things a lot different than most SEO companies. Before you think about hiring us, you need to be aware of how we do things here at LMS to see if we'd be a good fit for you and your company. For starters, *we don't tie you to a LONG- TERM Contract!* Yes, you can cancel at any time! I'm amazed at how many other SEO companies tie clients to yearlong contracts!

Secondly, we don't hide all the things we're going to do, like it is a big mystical secret. The Blueprint WORKS! It takes our team a lot of time, dedication, and hard work! If you've read our blueprint, then you know what is going to happen and the exact steps we'll take to bring you to success.

Lastly, while other people may promise the number 1 spot in Google, we won't. We can promise that if you allow us to complete this Blueprint on your business, your traffic and revenues will grow. NOT OVERNIGHT, but systematically with the addition of a white hat SEO strategy.

If you've tried other SEO companies in the past, I think you'll be pretty refreshed when you work with us. But before you consider scheduling a call with me, please keep in mind that we are a very busy SEO and marketing agency. Often times, we have a waiting list of up to two months before a project can start.

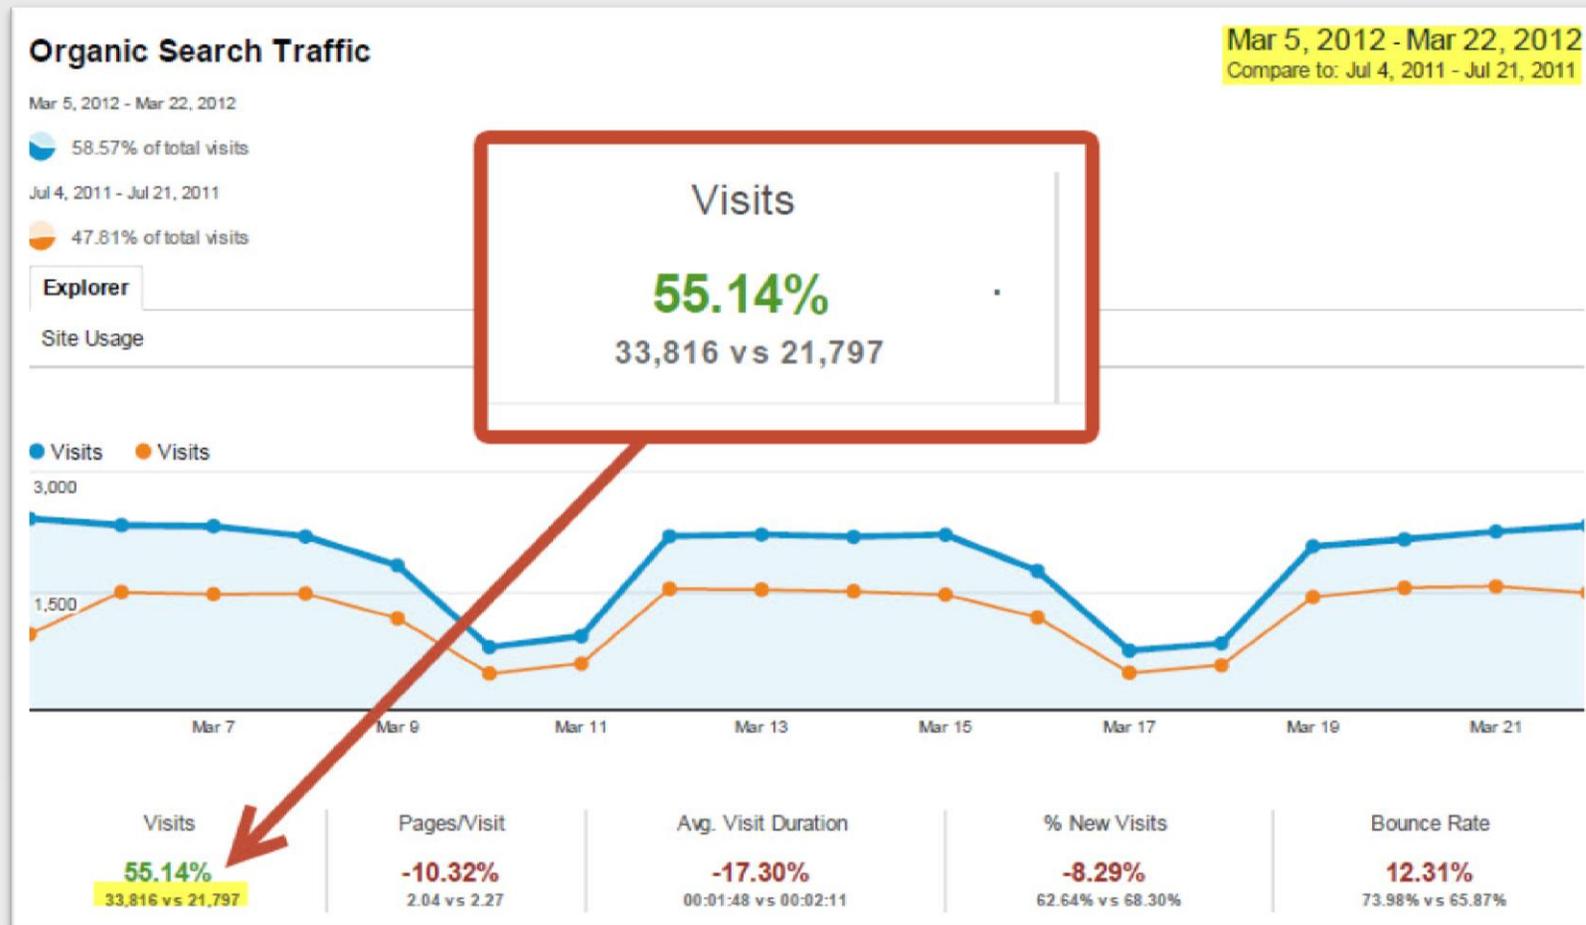

Secondly, remember you'll need a consistent monthly budget for your SEO marketing. You can start off fairly small and upgrade later as you see success, but you'll need a consistent monthly budget to get started to cover the cost for the content, social media, and continued reviews. If you're looking for consulting, or just some basic tweaks to your website, then we can provide that for a set fee, but if you want us to continue to grow your website, an ongoing budget is key to your success.

Finally, you must be willing to meet with us, implement the changes, and work together so we can see results! There is NOTHING more frustrating than having a client PAY US each month for results and then NOT implement the changes we suggest. Every client we work with MUST have periodic game plan meetings and be engaged with us when we're delivering reports.

If our SEO plan sounds like a good fit for your company, I invite you to schedule a FREE 30 minute consultation at www.morrisonmarketing.com. This is our method for meeting new prospective clients and determining if we'd be a good fit for them. You can also call our SEO department directly at 0141 229 0993. If possible, I prefer that you schedule a meeting on my calendar due to our busy schedules, client projects, and number of sales calls we receive each day. Honestly, sometimes we're not even able to answer our sales line or return prospect calls due to the number of inquiries received, so it is best to schedule if you'd like to speak with me directly.

Check out THIS GROWTH!

The real thing to measure is the amount of GROWTH our clients' receive... It isn't just about rankings!

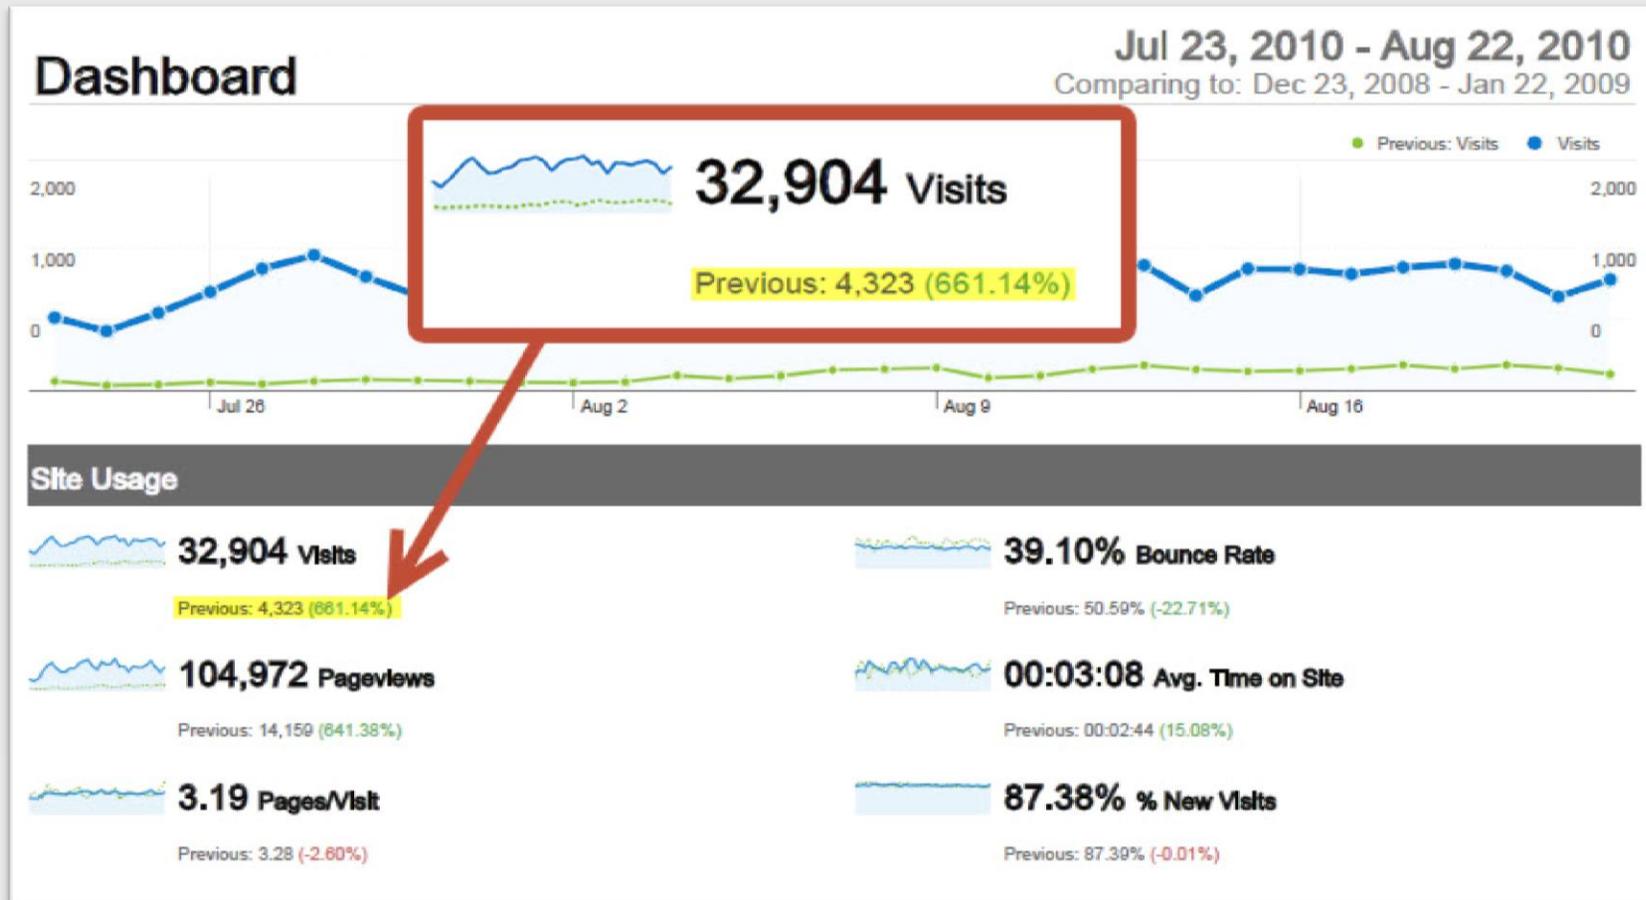

Zero to 5000+ Visits in Just 7 Months

This is some serious TRAFFIC growth for a startup company! How would you like 5000 visitors a month?

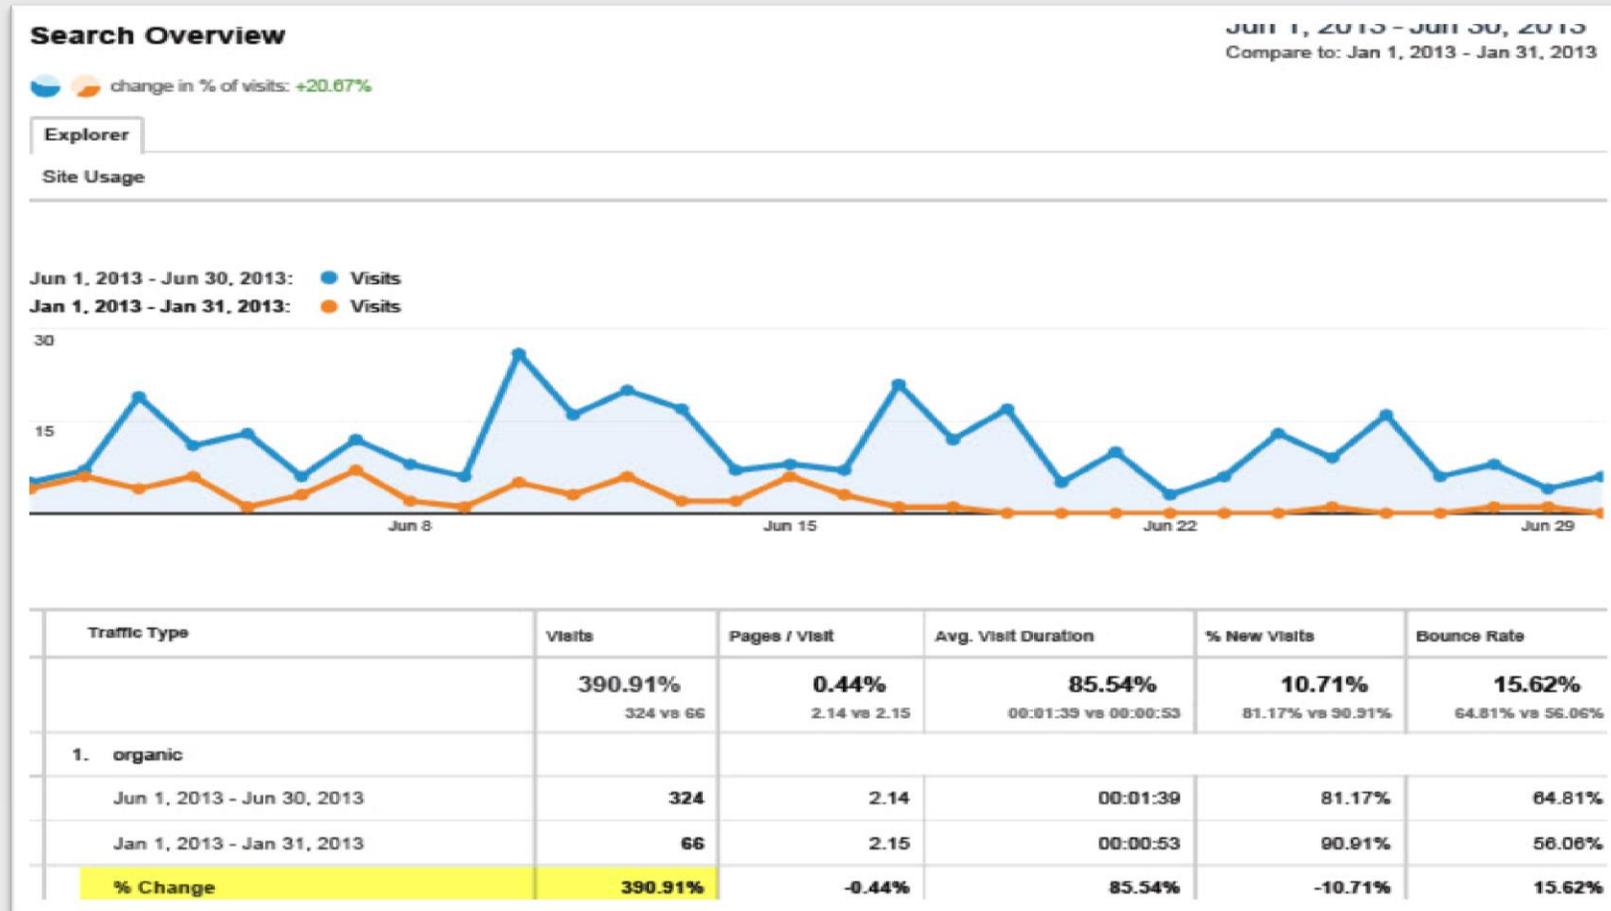

Start Up to 32,904 Visits per Month

By using content and our SEO process, this client jumped exploded their growth in 18 months!
